Welcome to the new EC2 console!
We're redesigning the EC2 console to make it easier to use and improve performance. We'll release new screens periodically. We encourage you to try them and let us know where we can make improvements. To switch between the old console and the new console, use the New EC2 Experience toggle.

CORS configuration
Block public access (bucket settings)
Public access is granted to buckets and objects through access control lists (ACLs), bucket policies, access point policies, or all. In order to ensure that public access to all your S3 buckets and objects is blocked, turn on Block all public access. These settings apply only to this bucket and its access points. AWS recommends that you turn on Block all public access, but before applying any of these settings, ensure that your applications will work correctly without public access.
Learn more
Block all public access
Turning this setting on is the same as turning on all
Block public access to buckets and
S3 will block public access permissions applied
public access to S3 resources using ACLs.
Block public access to buckets and
S3 will ignore all ACLs that grant public access
Block public access to buckets and
S3 will block new bucket and access point polic
Block public and cross-account acces
S3 will ignore public and cross-account access
Cancel
